

Data Engineer

The Company: www.cappitech.com

Cappitech is a leading provider of regulatory reporting and intelligence solutions for the financial services industry. As a thought-leader and innovator, we are radically changing the way the RegTech industry (a sub-set of Fintech) approaches the ever-growing amount of regulation being imposed on them. Using our award-winning, next-generation technology, global banks, brokers, asset managers and corporates rely on us to report their financial trades to local authorities. Led by a team of experts with track record in building financial technology products, Cappitech has been recognized as one of the most innovative RegTech companies in the industry and offers a working environment that encourages both professional and personal growth within the Israeli high-tech industry.

What you will do:

- You will work with the latest and greatest data technologies including: Relational/NoSQL/Big data databases and real-time data messaging and processing.
